LETTER OF REFERENCE

Dr Sergei Victorovich Petrov

It is a great pleasure to me to introduce Dr S Petrov, Docent of St. Petersburg University and the founder of LIMS (LLC Laboratory for the Study of Mineral Raw Materials).

I know Sergei since 2003 when he became for the Natural History Museum London the preferred contact to process for my projects the zircon separation and heavy mineral concentration in his lab. This cooperation has been steadily evolved since then, with more than 20 projects to date where LIMS contributed timely and in high-quality mineral extraction work and reported on the study of mineral properties and chemical composition.

We are engaged in very complex and precise studies of minerals, so we require a careful and accurate approach to our samples. The laboratory of S. Petrov is fully in compliance with our requirements and delivers reproducible results.

Natural History Museum London continues cooperation with LIMS and recommends this company as a reliable and professional partner. I can recommend Dr Petrov for his work attitude and best practise performance.

Yours sincerely,

Prof. Dr. Reimar Seltmann
Head, Center for Russian and Central EurAsian Mineral Studies
